Air Monitoring Summary Tables

The table below summarizes monitoring data collected using a portable wireless remote monitoring system.
All times in Easter Standard Time (EST).

Period H_2S Monitoring
Hydrogen Sulfide Offsite Monitors

Below are graphs for offsite locations where hydrogen sulfide (H_2S) was detected during the current reporting period.

The five stand-alone H_2S monitoring stations correlate with five of EPA's Viper monitoring system which includes areas to the north-northeast and south-southwest of the New-Indy Catawba Mill.

The prevailing wind direction for this report period was generally from the south to south-southwest. Winds were between 4 and 6 miles per hour throughout the day before dropping to 2 to 4 miles per hour during the evening hours.

See wind rose diagram with aerial map figure for full wind data during this reporting period.

The following locations did not detect hydrogen sulfide above 1 part per billion (ppb) during this reporting period: Catawba Headstart, Treetops, River Chase and Millstone Creek.

Period H_2S Monitoring
Hydrogen Sulfide Onsite Monitors

Below are graphs for onsite locations during the current reporting period.

Depending on wind direction, the H_2S measured at the onsite fence line locations may not exit mill property at reported concentrations. Wind directions from offsite locations, blowing onto mill property, will disperse ambient concentrations to lower levels prior to exiting the plant site.

The prevailing wind direction for this report period was generally from the south to south-southwest. Winds were between 4 and 6 miles per hour throughout the day before dropping to 2 to 4 miles per hour during the evening hours.

See wind rose diagram with aerial map figure for full wind data during this reporting period.
