^b Based on 30-minute averages.

Notes:

ATSDR MRL	Agency for Toxic Substances and Disease Registry Minimal Risk Level (MRL)
AEGL	EPA Acute Exposure Guidelines Levels
H ₂ S	Hydrogen Sulfide
TAPI	Teledyne API H ₂ S Analyzer
hr	Hour
min	Minute
ppb	Parts per billion
MRL Limit	Limit defined as a 14-day average value.

Wind rose – Shows the direction the wind is coming from, the monitoring station being at the center of the rose.

Period H₂S Monitoring Hydrogen Sulfide Offsite Monitors

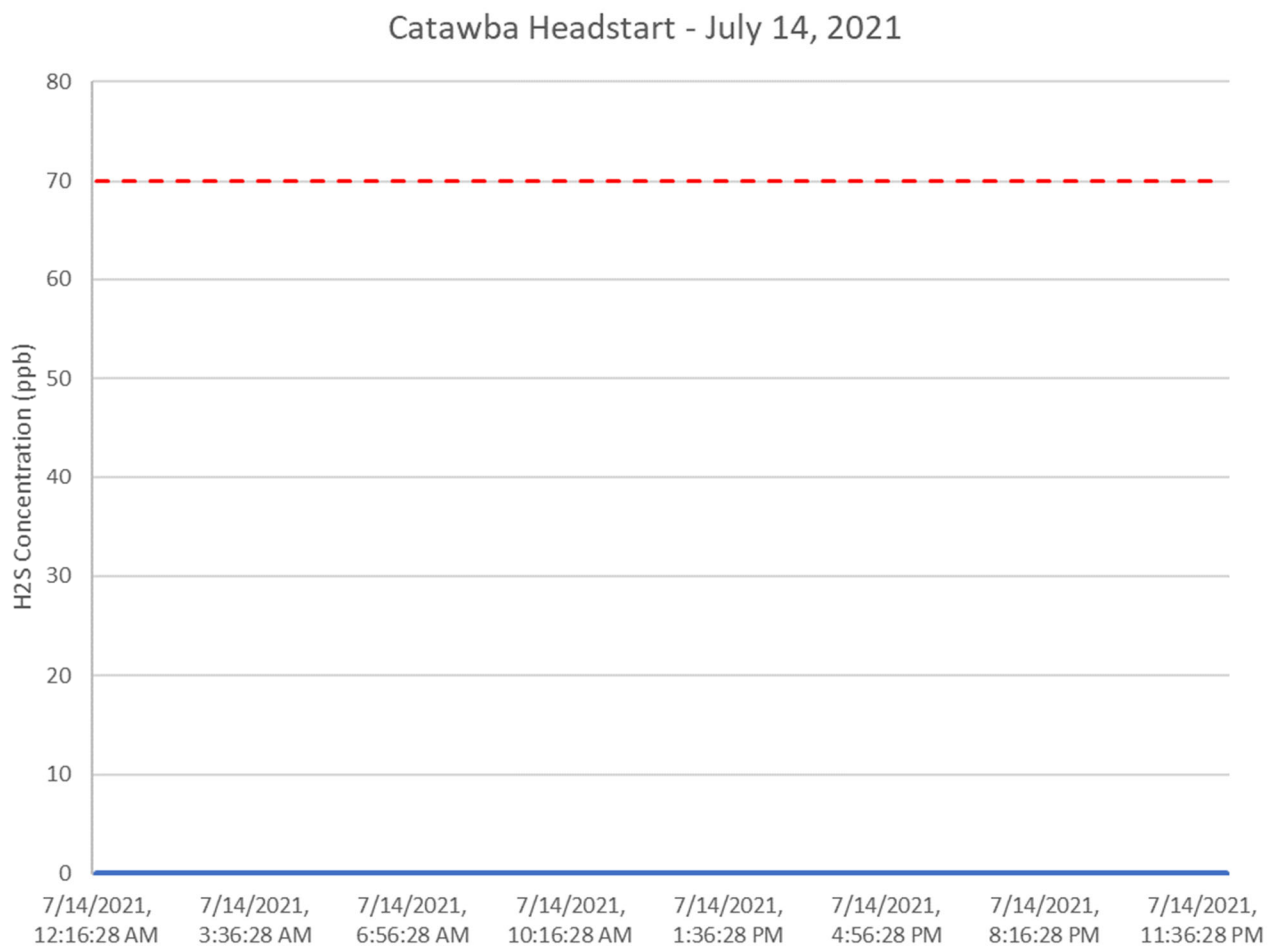

Below are graphs for offsite locations where hydrogen sulfide (H₂S) was detected during the current reporting period.

The five stand-alone H₂S monitoring stations correlate with five previous EPA's Viper monitoring system which includes areas to the north-northeast and south-southwest of the New-Indy Catawba Mill.

Winds were 2 to 4 miles per hour in the morning hours and increased to 4 to 8 miles per hour in the afternoon. Wind came from the south to southwest the whole day.

See wind rose diagram with aerial map figure for full wind data during this reporting period.

The following location did not detect hydrogen sulfide above 1 part per billion (ppb) during this reporting period: Catawba Headstart and Millstone Creek.

Treetops- July 14, 2021

Liberty Hill - July 14, 2021

Riverchase Estates - July 14, 2021

Millstone Creek - July 14 , 2021

Period H₂S Monitoring Hydrogen Sulfide Onsite Monitors

Below are graphs for onsite locations during the current reporting period.

Depending on wind direction, the H₂S measured at the onsite fence line locations may not exit mill property at reported concentrations. Wind directions from offsite locations, blowing onto mill property, will disperse ambient concentrations to lower levels prior to exiting the plant site.

Winds were 2 to 4 miles per hour in the morning hours and increased to 4 to 8 miles per hour in the afternoon. Wind came from the south to southwest the whole day.

See wind rose diagram with aerial map figure for full wind data during this reporting period.
