Air Monitoring Summary Tables

The table below summarizes monitoring data collected using a portable wireless remote monitoring system. All times in Easter Standard Time (EST).

Period H₂S Monitoring Hydrogen Sulfide Offsite Monitors

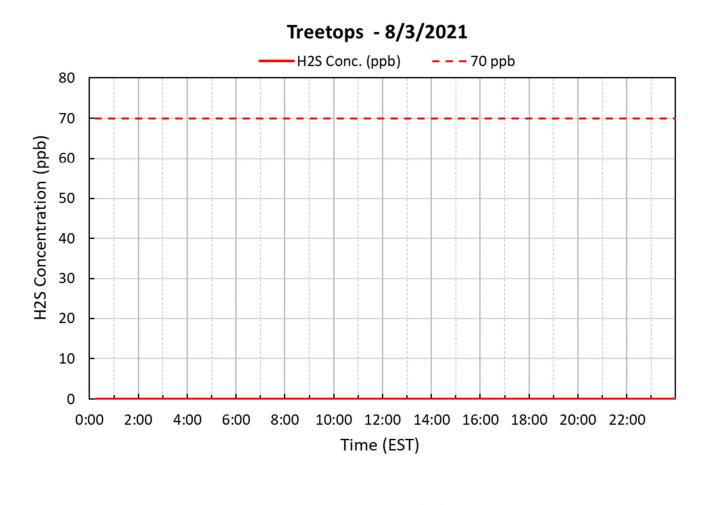

Below are graphs for offsite locations where hydrogen sulfide (H₂S) was detected during the current reporting period.

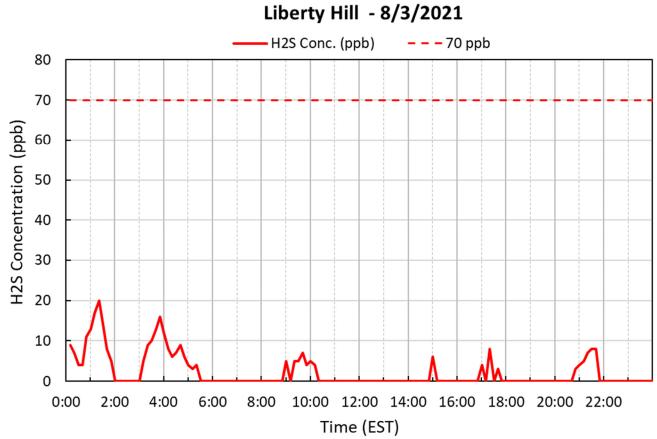

The five stand-alone H₂S monitoring stations correlate with five previous EPA's Viper monitoring system which includes areas to the north-northeast and south-southwest of the New-Indy Catawba Mill.

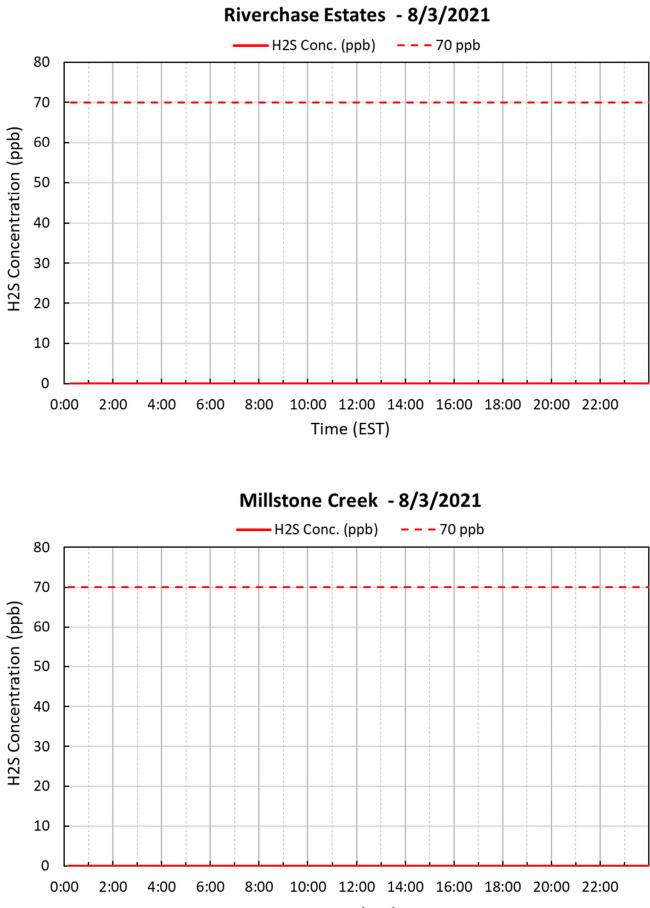

Winds were from the northeast at 3 to 11 mph.

See wind rose diagram with aerial map figure for full wind data during this reporting period.

Period H₂S Monitoring Hydrogen Sulfide Onsite Monitors

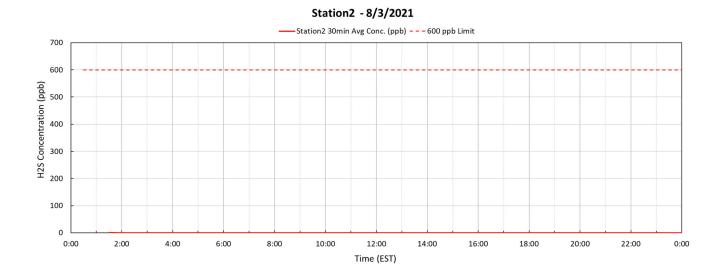

Below are graphs for onsite locations during the current reporting period.

Depending on wind direction, the H₂S measured at the onsite fence line locations may not exit mill property at reported concentrations. Wind directions from offsite locations, blowing onto mill property, will disperse ambient concentrations to lower levels prior to exiting the plant site.

Winds were from the northeast at 3 to 11 mph.

See wind rose diagram with aerial map figure for full wind data during this reporting period.
