# **Air Monitoring Summary Tables**

The table below summarizes monitoring data collected using a portable wireless remote monitoring system. All times in Eastern Standard Time (EST).

<sup>a</sup> Based on 30-minute averages.

<sup>b</sup> The 24-hr average at this location is not represented by the full 24-hr period; a total of 45 30-minute averages are missing from the reported period at Station

1 due to power outage after the storm and maintenance checks. Station 1 was back online at 22:30 EST.

<sup>c</sup> The 24-hr average at this location is not represented by the full 24-hr period; a total of 48 30-minute averages are missing from the reported period at Station 2 due to power outage after the storm and maintenance checks.

## Period H<sub>2</sub>S Monitoring Hydrogen Sulfide Offsite Monitors

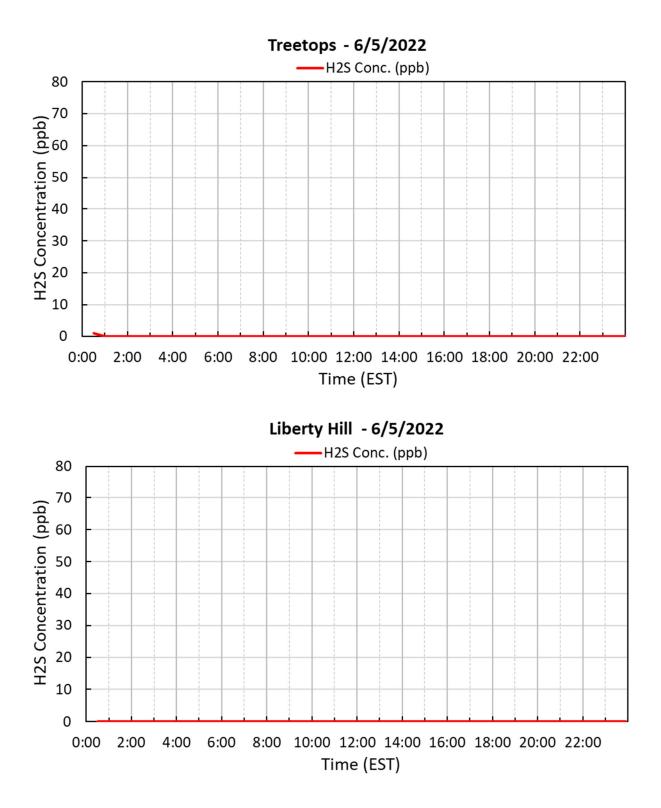

Below are graphs for offsite locations where hydrogen sulfide (H<sub>2</sub>S) was detected during the current reporting period.

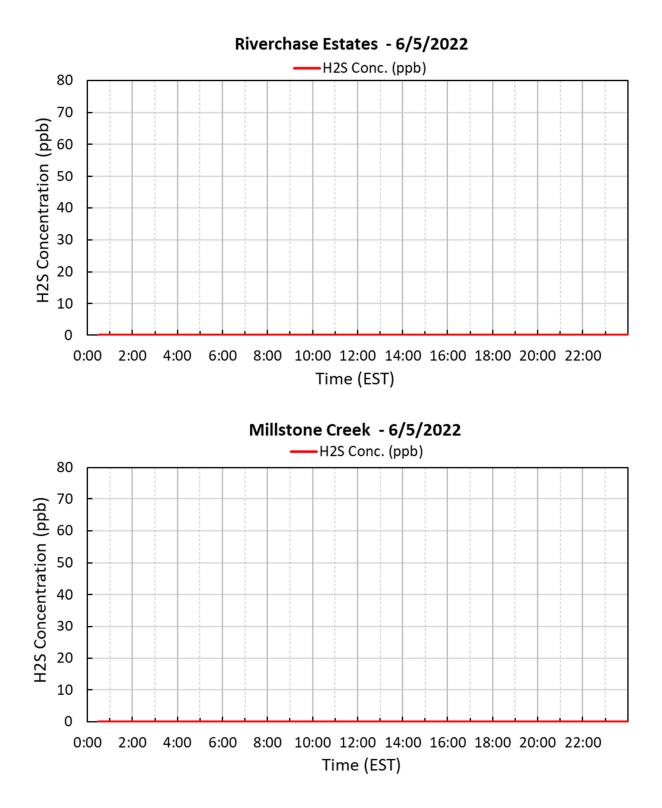

The five stand-alone H<sub>2</sub>S monitoring stations correlate with five previous EPA's Viper monitoring system which includes areas to the north-northeast and south-southwest of the New-Indy Catawba Mill.

Winds were coming from the west-southwest and the northeast at 0 to 3 mph.

See wind rose diagram with aerial map figure for full wind data during this reporting period.

## Period H<sub>2</sub>S Monitoring Hydrogen Sulfide Onsite Monitors

Below are graphs for onsite locations during the current reporting period.

Depending on wind direction, the H<sub>2</sub>S measured at the onsite fence line locations may not exit the mill property at reported concentrations. Wind directions from offsite locations, blowing onto mill property, will disperse ambient concentrations to lower levels prior to exiting the plant site.

Winds were coming from the west-southwest and the northeast at 0 to 3 mph.

See wind rose diagram with aerial map figure for full wind data during this reporting period.
