Period H_2S Monitoring
Hydrogen Sulfide Offsite Monitors

Below are graphs for offsite locations where hydrogen sulfide (H_2S) was detected during the current reporting period.

The five stand-alone H_2S monitoring stations correlate with five previous EPA's Viper monitoring system which includes areas to the north-northeast and south-southwest of the New-Indy Catawba Mill.

Winds were coming from variable directions at 1 to 5 mph.

See wind rose diagram with aerial map figure for full wind data during this reporting period.

Hydrogen Sulfide Onsite Monitors

Below are graphs for onsite locations during the current reporting period.

Depending on wind direction, the H_2S measured at the onsite fence line locations may not exit the mill property at reported concentrations. Wind directions from offsite locations, blowing onto mill property, will disperse ambient concentrations to lower levels prior to exiting the plant site.

Winds were coming from variable directions at 1 to 5 mph.

See wind rose diagram with aerial map figure for full wind data during this reporting period.
